

SUPPLEMENTAL MATERIAL TABLE OF CONTENTS

Supplemental File S1. Presence/absence data for all positions at which a transposon was detected in at least one strain

Supplemental File S2. Presence/absence data for all non-monomorphic positions at which a transposon was detected in at least one strain

Supplemental File S3. PDF of all GWA mapping results, including genetic architectures, linkage disequilibrium between QTL, and genotype-by-phenotype splits.

Supplemental File S4. GWAS results for all traits mapped

Supplemental Table S1. Most prevalent transposons.

Supplemental Table S2. Tajima's D and transposon number of 10 kb regions with at least three transposons

Supplemental Table S3. Chi-square test results comparing distributions of transposons in different genomic regions

Supplemental Table S4. Chi-square test results comparing distributions of transposons on chromosome arms and centers

Supplemental Table S5. Genomic regions of transposon insertion sites

Supplemental Table S6. Transposon insertions in genes with lethal RNAi or easily visible phenotypes

Supplemental Table S7. Transposon traits used for GWAS analysis

Supplemental Table S9. Peak information for mapped QTL

Supplemental Table S10. Correlated variants within QTL

Supplemental Table S11. Counts of unique piRNAs and transposons from BLAST alignments

Supplemental Table S12. Combinations of piRNAs and transposons from BLAST alignments

Supplemental Table S13. Strains with extreme transposon copy numbers

Supplemental Table S14. Variation found in piRNAs

Supplemental Table S15. Variation found in protein-coding genes and Grantham scores

Supplemental Table S16. Positions of transposable elements in the reference genome

Supplemental Table S17. Sequences of transposable elements and family groupings
